Section 2.01 Definitions

**Building height:** The vertical distance measured from the uniform finished grade to the highest point of the roof surface for flat roofs; to the deck line of mansard roofs, and to the average height between the highest eaves and ridge for gable, hip and gambrel roofs. Where a building is located on sloping terrain the height shall be measured from the average ground level of the grade at the building wall. Average ground level shall be determined by locating the mean between the extreme upper and lower finished grades per building elevation.
